**Projects**

**Project Title:** Koala Insulation  
**Role:** Lead Coding, Development and Implementation.  
**Technology Used:** Laravel, MySql, jQuery, HTML, CSS.  
**Project Description:** Koala Insulation is a royalty management software Where franchises have multiple territories, franchises can submit their weekly revenue report and can create their own multiple microsites. Admin can check the submitted weekly revenue report and can approve that report and move it to the paid report and also sync the paid report with Quick Book. Admin can also see all the weekly pending reports.

**Responsibilities:**

- Managed and provided leadership to a team of two resources throughout the development of the Koala Insulation royalty management software.
- Oversaw the project, ensuring effective coordination and collaboration among team members.
- Led the team in all phases of the project, including planning, development, and implementation.
- Implement integration with QuickBooks to sync paid reports seamlessly.

**Project Title:** Radium

**Role:** Coding, Development and Implementation.

**Technology Used:** Laravel, MySql, jQuery, HTML, CSS.

**Project Description:**

Radium is a money transfer banking app that allows users to find other nearby users to quickly transfer money, often small gratuities, to other app users. A user will be able to transfer money to another user without having to input the other user's bank account details, phone number, or email address. The app will show users based on their proximity to each other. A user will be able to verify the person near them based on their profile and transfer money from their account to them. A user can either be in receiver or giver mode and switch between the two modes. It has multiple user roles and multiple platforms like mobile apps and super admin web.

**Responsibilities**

- Created and implemented an API for seamless integration with the mobile application, ensuring secure and efficient data communication.
- Designed and developed the admin portal for Radium, providing user-friendly interfaces and intuitive functionalities for efficient management and control.

**Project Title:** HealthSlate

**Role:** Coding, Development and Implementation.

**Technology used:** Laravel, MySql, jQuery, Angular2, HTML, CSS.

A mobile telehealth service that provides health systems and health plans with breakthrough results on chronic diseases It also provides facilities like self-monitoring, patient education, and food guidance.

HealthSlate improves patients' quality of life and health outcomes. It has a variety of user roles and platforms, including a web coach portal, patient mobile apps, and a

super admin web.

**Responsibilities:**

- Developed and deployed the coach portal and Super admin reporting portal, providing a user-friendly platform for coaches to manage and interact with clients effectively.
- Implemented updates and improvements to the customer portal, enhancing the user experience and introducing new features for improved functionality.
